

Cedar Berries (Item #3007)

Pancreatic Function Support – A Diabetic’s Dream Herb

Cedar Berry is recommended for pancreatic dysfunction and insulin production, which may play a beneficial role for diabetics. It is also good for the stomach, lungs, liver and kidneys.

Dosage: Take 1 to 3 vegi-capsules daily or as directed by a qualified health professional.

Ingredients Explained

Cedar Berries - Also known as Juniperus Monosperma, Redberry Juniper, New Mexico Cedar, West Texas Juniper, and Sabina. A number of botanical databases note that the various chemical constituents (Alcohols, cadinene, camphene, flavones, flavonoids, glycosides, podophyllotoxin, Vitamin C volatile oils, resin, Sabinal, sugar, sulfur, tannins, and terpinene) of the leaves and berries do have emetic, germicidal, diuretic, antibiotic, and antiseptic properties. Cedar Berries were used by the great herbalist Dr. Christopher as an aid to balance the pancreas. He theorized that his success treating various forms of pancreas disease especially diabetes was due in part to the constituents of the herb lending themselves easily to the internal system for conversion to insulin. The author of this datasheet has personally used the herb with similar success.

Traditionally many parts of the tree were used by the American Indians for a host of health problems including cough, fever, rheumatism, diabetes, tuberculosis, scurvy, toothache and to promote menstruation. The well known James Duke notes the herb may help the body fight arthritis, asthma, cough, congestion, hepatitis and muscle stiffness. He sites the chemical as a treatment. Although more research is needed Cedar Berries have what appears to be a very successful tract recorded as a traditional medicine.

Caution: Cedar Berry can be toxic when taken in large amounts. It should not be used by people with kidney or urinary tract problems, or by pregnant or nursing mothers, as it may cause contractions.
